

# ENDURA-FORM

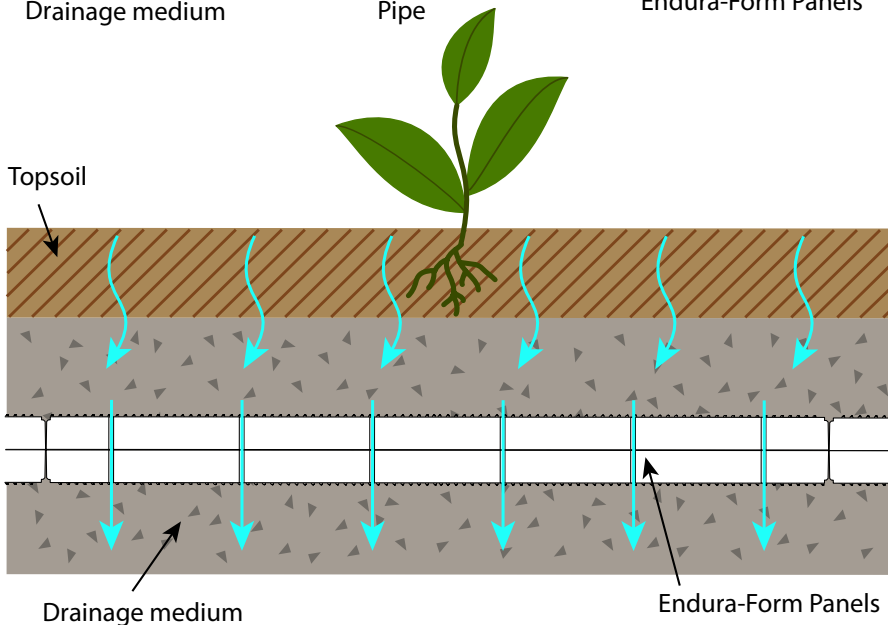

MULTI PURPOSE CONSTRUCTION PANELS BY T&R INDUSTRIES

## Horticulture Application - Under Soil Heating

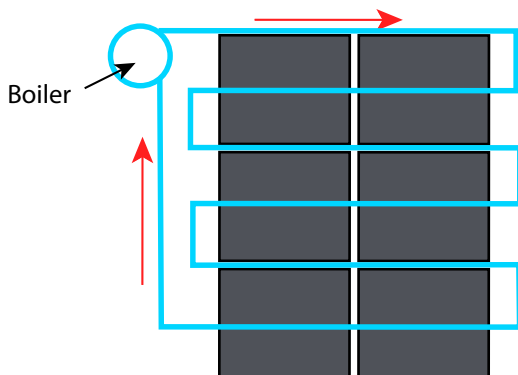

### HEATING

Pipes are run through the Endura-Form panels and covered with drainage medium and topsoil. Alternatively, plant pots may be placed directly on panels. Heated water is passed through the panel pipes and heat is radiated efficiently to the soil, maintaining even temperature and using energy efficiently.

### DRAINAGE

Each Endura-Form panel has 24 drain holes as well as ribs to direct the flow to the drain holes and allow the free drainage of water. Drain holes can be fitted with screens to prevent plugging.

### LAYOUT

Because of their modular nature, Endura-Form panels can be laid out in an endless combination of ways. Shown at the left is a simple layout showing a possible routing of pipes for heating purposes.
